

Task to do:

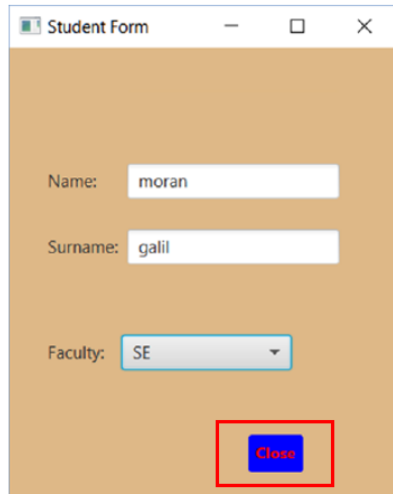

There is a project ClientServerGUI_FX. The application presents Server that Contain some information for a student . Client that get information from server By insert id and pressing on “Send” button .the application shows details of a student (see pictures below).

1. Make the button “Exit” is working.

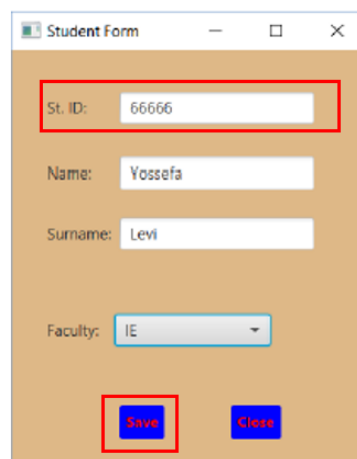

2. Add a button 'Close' to the StudentForm (Button for returning to the previous window).

A screenshot of a window titled "Student Form". The window has a light orange background. It contains three input fields: "Name:" with the value "moran", "Surname:" with the value "galil", and "Faculty:" with a dropdown menu showing "SE". At the bottom right, there is a blue button labeled "Close" which is highlighted with a red rectangular box.

3. Add the label "St. ID:" and *TextField* for presenting a student's ID (see "Student Form" above).

4. Add a button "Save" and its functionality - saving the data in the Server.

A screenshot of the "Student Form" window after additional fields and buttons have been added. It now includes a "St. ID:" label and a text field containing "66666", which is highlighted with a red rectangular box. Below the previous fields, there are two blue buttons: "Save" (highlighted with a red rectangular box) and "Close". The "Name:" field now contains "Yossefa" and the "Surname:" field contains "Levi". The "Faculty:" dropdown menu still shows "IE".
